

SELECTING YOUR PERFECT BATHTUB

SIZING GUIDE

Tyrrell & Laing
INTERNATIONAL INC.

BENEFITS

It is a well known fact that soaking in a hot bath has many health benefits. Stress-reduction, relaxation, and pain relief to name a few.

Bathtubs have now become an essential part of the bathroom - the centerpiece to the room.

There are some things to consider when purchasing a new bathtub for your bathroom.

In this guide we will cover the 4 most common questions we get asked from our customers who are purchasing a bathtub.

MATERIALS

Check out our "Material Guide" in our Blog for Pros and Cons with popular materials on the market.

PLAN

Measure your space, request templates and spec sheets.

DESIGN

Collect samples and create mood boards, this will help guide you to achieving your desired end result.

HOW MUCH SPACE DO YOU HAVE?

Whether you are remodeling or building from scratch request specs or CAD Drawings for tub styles that catch your eye.

A template is always really helpful for rough in purposes.

CAN YOU INSTALL A FREESTANDING TUB IN A SMALL BATHROOM?

Absolutely! Freestanding bathtubs can be installed in small condos, narrow bathrooms, and alcoves! Look through our website for inspiration.

HOW TALL ARE THE BATHER(S)?

Who will be bathing? The height of the bathers will help narrow down your options. You want to be comfortable as you soak, but you also want to be able to get in and out of the bathtub with ease.

ONE OR TWO PERSON BATHING?

A center drain is ideal for two person bathing, but can still be enjoyed with single person bathing as our drains are flush with the floor of the tub.

RESOURCES

Our "Material Guide" in our Blog features tips on choosing the best bathtub material for your bathroom.
